For Release SEPTEMBER 1, 1953

INDONESIANS TO STUDY MODERN FISHERY DEVELOPMENT MANAGEMENT

Five fishery technicians have arrived here from Djakarta, Indonesia, on Foreign Operations Administration grants for a year's in-service training and advanced instruction under guidance of the Fish and Wildlife Service, Secretary of the Interior Douglas McKay announced today.

They are the first of a group of 11 Indonesians who will be trained in the United States in various aspects of modern fishery development during 1953-54. The five now in Washington include Bartolomeus Bernard Lokollo, Fridrich Wilhelm Tehupuring, Raden Karnaen Among Prawira, Raden Soeroto, and Raden Koostedjo.

Lokollo, Tehupuring and Prawira will leave this week for California where they will receive instructions in diesel engineering and refrigeration, at the San Diego Vocational School.

Soeroto and Koostedjo will take in-service training in fishery statistics in Washington, and Gloucester, Mass., and will study statistical theory and practice at the University of North Carolina's agricultural school, for the purpose of improving Indonesia's methods of compiling fishery statistics.

Edwin H. Dahlgren, F&WS fishery biologist, now in Indonesia on a two-year FOA assignment advising on the rehabilitation and modernization of the fishing industry, assisted the Government of Indonesia and FOA in selecting the trainees.
